AUTHOR INDEX

VOLUME 57

Aasted, Bent, 285
Adam, Stephen A., 614
Ahlers, Suzanne E., 13
Aldrich, Carol E., 229
Alexander, Stephen, 340
Almond, Jeffrey W., 1187
Aloni, Yosef, 402
Amini, Shohreh, 357
Amster-Choder, Orna, 402
Anderson, Janice R., 446
Arfsten, Ann, 385
Arias, Carlos F., 1207
Ariga, Hiroyoshi, 792
Arlinghaus, Ralph B., 301
Arnheiter, Heinz, 922
Asselin, Claude, 165
Astell, Caroline R., 656
Aubert, Christine, 992
Avendaño, Luis F., 183

Bacchetti, S., 1177
Balachandran, N., 117
Bandtlow, Ingrid, 335
Bargmann, William J., 371
Barkas, Alexander E., 1073
Baskar, John F., 1149
Bastin, Marcel, 165
Bauer, Eva, 1084
Bauer, William R., 433
Baumann, Raymond P., 816
Bayer, Manfred E., 258
Bayer, Margret H., 258
Bechade, C., 1191
Beck, Ewald, 983
Begue, A., 1191
Belardelli, Filippo, 456
Bell, Susanne, 647
Bennink, Jack R., 786
Ben-Porat, Tamar, 191
Besemer, Juergen, 1084
Bestwick, Richard K., 534
Beug, H., 1127
Bhat, Bheem M., 1155
Bisher, Margaret E., 578
Bishop, Gail Abendroth, 294
Bissell, Mina J., 907
Blair, Donald G., 301, 310
Blair, Edward D., 1023
Blaisdell, Peter W., 759
Blavat, Geraldine, 46, 376
Blissard, Gary W., 318
Blondel, Bruno, 81
Bloom, Marshall E., 285
Bodnar, John W., 1094
Boege, Ulrike, 275
Bolen, Joseph B., 357
Bose, Henry R., Jr., 371
Brackmann, Karl H., 848
Brahic, Michel, 992
Breindl, Michael, 968
Brennan, Lynn A., 1073
Brodeur, David, 1073
Bruenn, J. A., 754
Buchmeier, Michael J., 397
Buckler-White, Alicia J., 697
Buckmaster, Anne, 647
Bühring, Hans-Jörg, 408
Burkhardt, Anne L., 629
Burns, Mary C., 1182
Burny, Arsène, 1198
Butel, Janet S., 357

SUBJECT INDEX
VOLUME 57

Abelson murine leukemia virus
  v-*abl*- and c-*abl*-encoded molecules
    monoclonal antibodies, 1182
Acquired immunodeficiency syndrome retrovirus
  human leukemic T-cell line Molt 4
    differential susceptibility, 1159
Adenoviruses
  E1A gene products
    lytic and transforming functions, 765
  E1A transcription repression
    pseudorabies virus tsG mutant, 13
  helper-independent human adenovirus
    type 5 cloning vector
      construction, 267
      deletion mutant development, 267
      herpes simplex virus type 1 thymidine kinase gene transfer, 267
  region E3 mutants
    E3A RNA 3′-end formation, 1155
Adenovirus type 2
  DNA-binding protein
    nucleotide mapping, 883
    structure and function, 883
  i-leader protein
    biosynthesis, 848
    immunoblot analysis, 848
    immunoprecipitation, 848
    intracellular distribution, 848
  late promoter
    simian virus 40 transcription and replication, 129
  L1-encoded proteins
    biosynthesis and properties, 839
    immunoblot analysis, 839
    immunoprecipitation, 839
  transcriptional ER4
    host cell shutoff, 833
    late gene expression, 833
    viral DNA replication, 833
  transformed hamster embryo cells
    pp60c-src protein kinase activity, 357
Adenovirus type 3
  E1A gene expression
    autoregulation, 1055
Adenovirus type 5
  E1A gene expression
    autoregulation, 1055
Adenovirus type 12
  E1A 13S mRNA unique region
    insertion mutation, 490
  E1B 58K gene product
    cell transformation initiation, 792
    viral DNA synthesis, 792
  transformed hamster embryo cells
    pp60c-src protein kinase activity, 357
Adsorptive mutants
  influenza A virus
    conditions for selection, 623
Agaricus bisporus viruses
  double-stranded RNAs
    synthesis and characterization, 1004
Aleutian disease virus
  monoclonal antibodies
    antigenic differences among strains, 285
    viral antigen sequestration sites, 285
    virus replication sites, 285
Alkaline exonuclease gene
  herpes simplex virus types 1 and 2
    detailed sequence analysis, 1023
α-Amanitin resistance
  vaccinia virus genomic location
    essential vaccinia virus genes, 65
    *Hin*dIII N fragment, 65
    temperature-sensitive mutants, 65
Amphotericin B
  ecotropic murine leukemia virus
    effect on murine cell fusion, 1048
Amplicon
  herpes simplex virus
    DNA cleavage and packaging, 933
Antibodies
  hepatitis B virus
    polypeptide X, 101
  respiratory syncytial virus infection in neonates
    role of placenta and breast milk, 1203
Antigenic variants
  type 1 poliovirus
    neutralizing monoclonal antibodies, 81
Antigenic variation
  equine infectious anemia virus
    persistent infection, 71
Avian leukosis virus
  lymphomas
    chicken c-*myc* gene mutations, 28
    proviral insertion and deletion patterns, 28
Avian retroviruses
  Sloan-Kettering avian retrovirus
    specific *ski* sequence identification, 1065
    transformation by recombination, 1073
Avian retrovirus MH2
  v-*mil*-defective mutants
    CL25 provirus cloning and characterization, 1191
    propagation of subgenomic RNA, 1191
5-Azacytidine
  endogenous retrovirus-related sequence expression
    C3H 10T1/2 cells, 1119

Bacillus subtilis bacteriophage ϕ105
  DNA analysis
    circular permutation of prophage genome, 1145
Bacteriophages
  bacteriophage fd, 258

deglycosylated virus, 340
envelope glycoprotein carbohydrate side chains, 340
envelope glycoprotein protein moiety, 340
Newcastle disease virus
hemagglutinin-neuraminidase and fusion glycoproteins
monoclonal antibodies, 1198
Nonsense mutation
bovine papillomavirus DNA
construction, 475
open reading frame E2, 475
Nonstructural proteins
Sendai virus
alternate AUG codons on P/C mRNA, 684
ribosomal initiation, 684
specific peptide sera, 684
Nuclear polyhedrosis virus
A. californica
delayed-early gene, 563
gypsy moth cell line, 197
infection cycle, 197
protein synthesis, 197
semipermissive replication, 197
trans-activating gene mapping, 563
transcriptional activity of 10K protein gene, 18
Nuclear protein oncogenes
intracisternal A particle
long terminal repeat activity, 998
Nucleic acid hybridization
pseudorabies virus DNA
adaptation of standard techniques, 335
detection in mouse inner ear, 335
Nucleocapsid complex
varicella-zoster virus
infected cell nuclear matrix, 155
viral nucleocapsid, 155
Nucleotide sequence analysis
herpes simplex virus type 2
ribonucleotide reductase subunits, 802

Octadecanucleotide probe
Friend spleen focus-forming virus
provirus identification, 349
mouse genomic DNA endogenous sequences, 349
Oligoribonucleotide
duck hepatitis B virus
minus-strand DNA synthesis template, 229
plus-strand DNA synthesis primer, 229
Oncogene expression
reticuloendotheliosis virus
avian hematopoietic tissues, 371
transformed lymphoid cell lines, 371
Oncogene products
intracisternal A particle
long terminal repeat activity, 998
Oncogenes
Sloan-Kettering avian retrovirus
specific *ski* sequence identification, 1065
Sloan-Kettering avian retroviruses
transformation, 1073
Origin DNA binding
simian virus 40 large T antigen
binding in mutants, 50
transforming activity, 50

Papillomaviruses
bovine papillomavirus
DNA nonsense mutation, 475
bovine type 1
E5 open reading frame, 1
transforming sequences, 1
European elks
pulmonary fibromatosis, 1173
human papillomavirus type 16
DNA-induced transformation, 572
human papillomavirus type 6 DNA
characterization, 353
cloning, 353
isolation, 353
new virus (HPV34)
Bowen's disease of the skin, 688
isolation and characterization, 688
molecular cloning, 688
Paramyxoviruses
cytotoxic T lymphocytes in mice
mumps-specific cytotoxicity, 1113
Pararotavirus
in vitro transcription, 183
RNA polymerase
activation, 183
properties, 183
structure, 183
Phenotypic reversion
*ts*110 Moloney murine sarcoma virus
deletion, 310
molecular basis, 310
thermosensitive splicing, 310
Phosphorylation
polyomavirus middle T antigen, 237
Picornaviruses
human rhinovirus 14
neutralization immunogens, 246
mengovirus 14S capsid precursor particles
purification, 275
proteases and genome-linked protein
degree of similarity, 1084
molecular cloning, 1084
sequence determination, 1084
Plasma membrane
Sendai virus
interaction with viral proteins, 678
Plasmids
A. californica nuclear polyhedrosis virus
plasmid 39CAT, 563
recombinant plasmid pVNR4
simian virus 40 early-region promoter, 91
simian virus 40 core sequence-flanking
regulatory sequence interaction
promoter functions, 138
replication efficiency, 138
T-antigen binding, 138
Plus-strand DNA synthesis
duck hepatitis B virus
capped oligonucleotide as primer, 229
Polioviruses
guanidine-selected mutants
polypeptide 2C-encoding RNA sequence, 638
resistance mutation, 638
type 2 Lansing
mouse neurovirulence, 515
sequence mapping, 515
type 1-type 3 recombinants
production by use of cDNA, 1187
Poliovirus, type 1
neutralizing monoclonal antibody resistance mutations
location with respect to antibody-binding site, 81
molecular basis, 81
Polydnaviruses
C. sonorensis virus
polydnavirus DNA in wasps, 552
Polymerase error frequencies
RNA virus genome single base sites

quantitation, 219
Polyomavirus
integrated defective genome
biological properties, 205
origin and structure, 205
superinfection rescue, 205
large T antigen
DNA-binding function, 505
guanine contacts, 505
neoplastic transformation, 165
tumorigenesis, 165
middle T antigen
cell transformation, 237
gastrin homology, 237
phosphorylation, 237
middle T-antigen coding region
transformed Fischer rat fibroblasts, 211
middle T antigen, truncated forms
lytic infection, 367
mutant genome
immortalization potential, 165
Polypeptides
adenovirus type 12 E1B product
cell transformation initiation, 792
viral DNA synthesis, 792
woodchuck hepatitis virus pre-*s* region
identification and localization, 173
Polypeptide X
hepatitis B virus
expression in *E. coli*, 101
plasmid construction, 101
specific antibodies in sera, 101
Polyprotein cleavage
cowpea mosaic virus
ATP dependence, 547
proteolytic activity, 547
pp60c-*src* protein kinase activity
transformed hamster embryo cells
adenoviruses 2 and 12, 357
bovine papillomavirus 1, 357
simian virus 40, 357
Pre-early genes
localization in bacteriophage T5
restriction enzyme fragment isolation, 759
Primate cells
measles virus-specific gene product expression
cDNA library, 343
Promoter
herpes simplex virus L component gene
genome terminal *a* sequence, 629
Proteases
bovine leukemia virus
biological specificity, 826
gag precursor polyprotein in vitro processing, 826
purification and chemical analysis, 826
picornaviruses
degree of similarity, 1084
molecular cloning, 1084
sequence determination, 1084
Proteins
Sendai virus
interaction with plasma membrane, 678
Proteolytic activity
cowpea mosaic virus
viral polypeptide cleavage, 547
Proviral insertion and deletion
avian leukosis virus
chicken c-*myc* gene, 28
Provirus, mouse mammary tumor
T-cell lymphoma
molecular cloning and analysis, 385
polymorphism, 385
synthesis mechanism, 385
Pseudorabies virus
Bartha strain
glycoprotein gI, 191
release from cells, 191
US genome region, 191
virulence, 191
DNA detection in inner ear
in situ hybridization, 335
Norden strain
glycoprotein gI, 191
release from cells, 191
US genome region, 191
Pseudorabies virus tsG mutant
adenovirus E1A transcription repression
temperature, 13
tsG/adenovirus ratio, 13
wild-type pseudorabies virus, 13
Pulmonary fibromatosis
fibromas in European elks
papillomavirus DNA, 1173

Rat cells
Rous sarcoma provirus expression
gene transcription and regulation, 907
role of 5′ duplications, 907
Rauscher murine leukemia virus
neutralizing antibody response
deglycosylated virus, 340
envelope glycoprotein carbohydrate side chains, 340
envelope glycoprotein protein moiety, 340
Reassortant viruses
mixed rotavirus infection in mice
genome RNA analysis, 110
kinetic analysis, 110
progeny analysis, 110
Receptor antibody
human rhinoviruses
blocking of attachment, 7
Recombinant murine retroviruses
HTLV-II and HTLV-III/LAV
construction, 379
Recombinant polioviruses
type 1-type 3 intergenic recombinants
production by use of cDNA, 1187
Recombinant viruses
Moloney murine leukemia virus
isolation, 37
primer tRNA, 37
structure, 37
Reovirus
genome hybridization
cellular rRNA, 917
Replicase
S. cerevisiae virus, 754
Resistance to neutralizing monoclonal antibodies
location of mutation in type 1 poliovirus, 81
Respiratory syncytial virus
cotton rats
effect of Formalin, 721
pulmonary pathology, 721
infection in neonates
role of breast milk-acquired antibodies, 1203
role of transplacentally acquired antibodies, 1203
Respiratory syncytial virus nucleoprotein
comparison with measles virus hemagglutinin
cross-reaction, 394
immunofluorescence, 394
radioimmunoprecipitation, 394
Restriction enzyme fragment isolation
bacteriophage T5
pre-early gene localization, 759
Reticuloendotheliosis virus
transformed lymphoid cell lines and avian tissues
oncogene expression, 371
Retroviruses
aberrant clone
structure and formation, 674
tRNA sequence between LTRs, 674
endogenous retrovirus-related sequence expression
C3H 10T1/2 cells, 1119
effects of 5-azacytidine, 1119
HTLV-III
susceptibility in Molt-4 cells, 1159
reticuloendotheliosis virus
oncogene expression, 371
Retroviruses, recombinant murine
HTLV-II and HTLV-III/LAV
construction, 379
Retrovirus MH2
v-*mil*-defective mutants
CL25 provirus cloning and characterization, 1191
propagation of subgenomic RNA, 1191
Reverse transcription
duck hepatitis B virus
capped oligoribonucleotide, 229
minus-strand DNA synthesis, 229
Revertant virus
Moloney murine leukemia virus
isolation, 37
primer tRNA, 37
structure, 37
Reye's syndrome
varicella-zoster virus strains
neutral lipid metabolism, 809
Rhabdomyosarcoma cells
enterovirus infection inhibition
monoclonal antibody, 438
Rhesus rotavirus RRV
mixed infection with SA11 in mice
reassortant progeny analysis, 110
Ribonucleotide reductase subunits
herpes simplex virus
identification and separation, 1177
reaction with monoclonal antibodies, 1177
herpes simplex virus type 2
3′-coterminal transcripts, 802
nucleotide sequence analysis, 802
Ribosomal initiation
Sendai virus P/C mRNA
alternate AUG codons, 684
RNA
coronaviruses
recombination during infection, 729
simian virus 40
identification, 402
in vitro synthesis, 402
RNA, double stranded
S. cerevisiae virus

conservative replication and transcription, 754
in vitro replication, 754
RNA 3′-end formation
adenovirus region E3 mutants, 1155
RNA polymerase
human pararotavirus
activation, 183
properties, 183
RNA synthesis
coronaviruses
effect of cycloheximide, 328
temporal sequence, 328
RNA viruses
genome hybridization
cellular rRNA, 917
RNA virus genome
base substitution levels
quantitation, 219
sequence analysis, 219
Rotaviruses
DNA clones
base sequence heterogeneity, 1207
double-stranded RNA, 1207
host response
T-cell-deficient mice, 706
mixed infections in mice
genome RNA analysis, 110
kinetic analysis, 110
reassortant progeny analysis, 110
murine rotavirus
cultivation and characterization, 585
neutralization specificity
gene identification, 376
virulence differences among strains
gene segment 4, 46
molecular basis, 46
reassortant virus derivation, 46
Rous-associated virus 1
erythroleukemic cells
erbB-related protein expression, 1127
in vitro characterization, 1127
Rous sarcoma virus
integrated provirus expression in rat cells
gene transcription and regulation, 907
role of 5′ duplications, 907
Rubella virus
antigen localization
hemagglutination and neutralization, 893
monoclonal antibodies, 893

Sabin type 1 poliovirus
neutralizing monoclonal antibody resistance mutations
location with respect to antibody-binding site, 81
molecular basis, 81
Saccharomyces cerevisiae virus
double-stranded RNA
conservative replication and transcription, 754
in vitro replication, 754
Sendai virus
newly synthesized proteins
interaction with plasma membrane, 678
nonstructural protein origin
alternate AUG codons on P/C mRNA, 684
ribosomal initiation, 684
specific peptide sera, 684
Simian rotavirus SA11
coinfection with bovine rotavirus NCDV
neutralization phenotypes, 376
reassortant RNA segments, 376
mixed infection with RRV in mice
reassortant progeny analysis, 110
virulence compared with bovine rotavirus NCDV
gene segment 4, 46
molecular basis, 46
Simian virus 40
adenovirus type 2 late promoter
early gene expression, 129
replication, 129
transcription, 129
virus viability, 129
core origin of replication
interaction with flanking regulatory sequences, 138
deletion mutants
large T-antigen properties, 539
early-region mutants, 857
early-region promoter
recombinant plasmid pVNR4, 91
large T antigen DNA-binding properties
binding in mutants, 50
origin DNA binding, 50
transforming activity, 50
late gene expression
primer extension analysis, 91
S1 nuclease analysis, 91
transfection into COS and mouse L cells, 91
monoclonal antibodies for large T antigen
antigenic binding sites, 1168
isolation, 1168
small RNA
identification, 402
in vitro synthesis, 402
transformed hamster embryo cells
pp60c-src protein kinase activity, 357
tumor antigen
DNA-binding region location, 776
purification, 776
tumor antigen expression
replication-defective genomes, 857
transfected mouse fibroblasts, 857
Sindbis virus
genome hybridization
cellular rRNA, 917
neutralization epitopes
antibody-selected variation and reversion, 715
Sloan-Kettering avian retroviruses
cloned v-*ski* oncogene
virus transformation by recombination, 1073
specific *ski* sequence
identification and properties, 1065
Soluble glycoprotein
vesicular stomatitis virus
formation during or after translation, 968
Splenomegaly, early
induction by Friend murine leukemia helper virus strains
recombinant mink cell focus-forming virus generation, 389
Splicing defect, temperature sensitive
Moloney murine sarcoma virus
host cell independent, 301
virus encoded, 301
Stereo images of viral assembly
vesicular stomatitis virus
freeze-etch platinum replica method, 922
viral protein immunolabeling, 922
Structural polypeptide
vaccinia virus Tian Tan strain
late gene cloning and DNA sequence, 693
Superinfection rescue
polyomavirus
integrated defective genome, 205

T-cell lymphoma
mouse mammary tumor provirus
molecular cloning and analysis, 385
synthesis mechanism, 385
Temperature-sensitive defects
Moloney murine sarcoma virus
host cell independent, 301
virus encoded, 301
Terminal protein
minute virus of mice
covalent binding to DNA, 1094
identification and characterization, 1094
Theiler's virus
persistence and tissue lesions
central nervous system infection, 992
Thermolabile DNA-binding protein
adenovirus type 2
nucleotide mapping, 883
structure and function, 883
Thymidine kinase
induction by Epstein-Barr virus
characterization, 1105
Thymidine kinase gene
herpes simplex virus type 1
human adenovirus type 5 cloning vector, 267
Topoisomerase activity
enucleated, synchronized mouse L cells
cell cycle phase, 433
vaccinia virus infection, 433
virosomes, 433
Transcriptase
S. cerevisiae virus, 754
Transcription
human cytomegalovirus
early transcript characterization, 591
Transmissible gastroenteritis virus
mRNA characterization, 1010
mRNA translation, 1010
protein identification, 1010
tRNA
revertant murine leukemia virus
primer binding site, 37
Tumor antigen
simian virus 40
DNA-binding region location, 776
expression in mice, 857
purification, 776
Tunicamycin
Epstein-Barr virus replication, 117

Uukuniemi virus
membrane glycoproteins
accumulation in Golgi complex, 899
changes of Golgi complex, 899

Vaccinia virus
mouse L cytoplasts

type I topoisomerase activity, 433
temperature-sensitive mutants
α-amanitin resistance gene location, 65
DNA and viral protein synthesis, 65
essential vaccinia virus genes, 65
Tian Tan strain
comparison with WR strain, 693
late gene cloning and DNA sequence, 693
Varicella-zoster virus
nomenclature
glycoprotein genes, 1195
glycosylated gene products, 1195
nucleocapsid complex p32-p36
infected cell nuclear matrix, 155
phosphorylation, 155
viral nucleocapsid, 155
strain differentiation
neutral lipid metabolism, 809
Veneral transmission
murine cytomegalovirus
mouse testes, 1149
replication in sperm cells, 1149
Vesicular stomatitis virus
base substitution frequency
quantitation methods, 219
genome hybridization
cellular rRNA, 917
humoral immune response in mice
effect of cyclosporin A, 1139
mouse peritoneal macrophages
antiviral state of mouse cells, 456
mRNA-protein interaction in HeLa cells
conditions, 614
photochemical cross-linking, 614
soluble glycoprotein
formation during or after translation, 968
stereo images of assembly
freeze-etch platinum replica method, 922
viral protein immunolabeling, 922
Viral assembly
vesicular stomatitis virus stereo images
freeze-etch platinum replica method, 922
viral protein immunolabeling, 922
Virion assembly of picornaviruses
14S capsid precursor particle
purification
immunoaffinity chromatography, 275
sucrose gradient centrifugation, 275
Virosomes
vaccinia-associated topoisomerase I, 433

West Nile virus
interaction with primary murine macrophages
role of cell activation, 952
role of receptors for antibody and complement, 952
Woodchuck hepatitis virus
pre-*s*-encoded polypeptides
hepadnavirus host cell entry, 173
identification and localization, 173
